REPORT

- Name: Apoorav Raina
- Reg No: 25BAI11343
- Branch: CSE(AIML)
- Year:2025
- Course: CSE0001 Digital Literacy

TASK-1 Report:

I created my digital literacy infographic using Canva. The design focuses on explaining the meaning of digital literacy and why it is important for students. It includes sections on useful digital tools, safe internet practices, and email etiquette. I used icons and simple points to make the content easy to understand. The most interesting part was designing the layout and choosing colours that make the infographic visually appealing. The challenging part was summarizing all information in a single page without making it crowded. Overall, this task helped me understand the importance of digital skills in academics and professional life.

TASK-2 Report:

For my digital portfolio, I created profiles on GitHub, LinkedIn, and HackerRank. GitHub is used to store and showcase coding projects, LinkedIn is a professional networking platform, and HackerRank is useful for practicing coding skills.

On GitHub, I created a profile README that includes my name, branch, and learning goals. On LinkedIn, I added my education details including my B.Tech degree and university. HackerRank was used to start basic coding practice.

Over the next four years, I plan to regularly update these platforms. I will upload projects on GitHub, connect with professionals on LinkedIn, and improve my coding skills on HackerRank. These platforms will help me build a strong professional identity and increase my chances of getting internships and job opportunities.

This task helped me understand the importance of having an online presence.

TASK-3 Report:

In this task, I explored both coding and collaboration platforms. For coding practice, I used HackerRank and completed a beginner-level problem. It helped me understand basic problem-solving and coding logic.

For collaboration, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions including multiple-choice and short answer types. I also viewed responses in Google Sheets, which helped me understand how data can be collected and analysed easily.

This task was very useful because it introduced me to tools that are widely used in academics and industry. HackerRank will help me improve my coding skills over time, while Google Forms can be used for surveys, quizzes, and data collection in projects.

Overall, I learned how digital tools can make learning more interactive and efficient.

TASK-4 Report:

Poor digital communication can lead to misunderstandings and missed opportunities. For example, if a student sends an email without a proper subject or uses informal language, the professor may ignore it or misunderstand the request. This can create unnecessary problems.

To avoid such situations, it is important to use clear subject lines, polite language, and proper structure in emails. Professional communication ensures that the message is understood correctly and creates a positive impression.

This task helped me understand the importance of email etiquette and how small mistakes can impact communication.

TASK-5 Report:

While researching cybercrime, I was surprised to learn how easily people fall victim to simple scams like UPI fraud. Many users are not aware that scanning a QR code can lead to money being deducted instead of received.

This made me realize the importance of being cautious while using digital payment systems. One habit I will change is double-checking every transaction request before approving it.

This task increased my awareness of online threats and taught me practical steps to stay safe.
